

DevTech is searching for a talented Backend Developer to join our growing engineering team in Munich. The ideal candidate will have hands-on experience with Node.js and a passion for building scalable, high-performance backend systems. As a Backend Developer, you will help us create and maintain the core architecture of our applications, working closely with other developers and stakeholders to deliver top-notch solutions.

Key Responsibilities:

- Develop robust, scalable, and secure APIs and services using Node.js.
- Write server-side logic, database queries, and integrate third-party services.
- Optimize applications for performance and scalability.
- Troubleshoot and resolve technical issues across the backend infrastructure.
- Work with frontend developers to integrate user-facing elements with server-side logic.
- Collaborate with the team to design and implement new features and improvements.
- Ensure the security of applications and handle sensitive data responsibly.

Required Skills:

- Strong experience with Node.js, Express.js, and RESTful API design.
- Familiarity with databases like MongoDB, MySQL, or PostgreSQL.
- Experience with authentication and authorization strategies (OAuth, JWT).
- Knowledge of containerization (Docker) and cloud services (AWS, GCP).
- Strong understanding of server-side logic and microservice architecture.
- Experience with version control systems, specifically Git.

Nice to Have:

- Knowledge of GraphQL and Apollo.
- Experience with testing frameworks such as Mocha or Jest.
- Familiarity with CI/CD pipelines and automated deployment processes.
